

Evolution of Operating System

1940s-1950s: Early Beginnings

- > Computers operated without operating systems.
- > Programs were manually loaded and run, one at a time.
- > The First operating system was introduced in 1956.

Label

1960s: Multiprogramming and Timesharing

- > Introduction of multiprogramming to utilize CPU efficiently.
- > Timesharing systems, like CTSS(1961) and Multics(1969), allowed multiple users to interact with a single system.

Label

1970s: Unix and Personal Computers

- > Unix(1971) revolutionized OS design with simplicity, portability and multitasking.
- > Personal computers emerged, leading to simpler OSs like CP/M (1974) and PC-DOS (1981)

Label

1980s: GUI and Networking

- > Graphical User Interfaces (GUIs) gained popularity with systems like Apple Macintosh (1984) and Microsoft Windows (1985).
- > Networking features, like TCP/IP in Unix, became essential.

Label

1990s: Linux and Advanced GUIs

- > Linux (1991) introduced open-source development.
- > Windows and Mac OS refined GUIs and Gained widespread adoption.

Label

2000s-2010s: Mobility and Cloud

- > Mobile OSs like Symbian Known as the first true smartphone OS and Blackberry OS Dominated the early 2000s.
- > Cloud-based and virtualization technologies reshape computing, with OSS like Windows Servers and Linux driving innovation.

Label

2010s-Present: Mobility

- > Mobile OSs like windows phone OS launched by Microsoft in 2010, popular OSs like IOS (2007) and Android (2008).
- > Smartwatch OS like TIZEN by Samsung (2012).
